

MIS107 – Semester Project Assignment Brief (Spring 2026)

Responding to the RFP: Integrated Parking Management Information System (IPMIS)

Brief prepared by: Noman H. Chowdhury (MNC)

DhakaPark Ltd. is a company operating **multiple parking facilities across Dhaka city**, serving walk-in drivers, monthly subscribers, and corporate clients. The organization currently relies on **manual and loosely connected legacy systems**, leading to operational inefficiencies, data inaccuracies, revenue leakage, and increasing customer dissatisfaction.

To address these challenges, DhakaPark Ltd. has issued this **Request for Proposal (RFP)** seeking a **high-level design** of an **Integrated Parking Management Information System (IPMIS)**. A **separate detailed case document** describing the business context, pain points, and environment has been provided and must be used as the primary reference.

Student teams will act as **vendors responding to this RFP**.

DhakaPark Ltd. requests proposals that focus on **one well-defined implementation phase**.

Your proposal should address the following high-level requirements:

1. Information System Design

We expect a coherent proposal covering:

- **Transaction Processing System (TPS)** - What low-level data will be captured/ How data will be captured (devices, interfaces, automation)/ Justification of technology choices
- **Management Information System (MIS)** - Example managerial reports/ Purpose of each report and target users
- **Executive Support System (ESS)** - High-level dashboard views/ Key performance indicators (KPIs) for senior management

Students must clearly explain **why** each system component is needed.

2. Visual and Analytical Tools

Your proposal must include:

- A **Rich Picture** representing the current situation and key stakeholders
- A **Flowchart** showing how the proposed mobile app operates
- An **IT Dimension Framework** (Management – Organization – Technology – Business Challenges – Business Solutions)
- Discussion of **complementary assets** (managerial, organizational, social) required for system success

3. Digital Interfaces

- A **customer-facing website** (design/mockups of key pages)
- **At least one mobile app** (either customer-facing or employee-facing) - UI design only (no coding required)

4. Data, Technology, and Future Readiness

Your proposal should also include:

- A **data management approach** (cloud, on-premise, or hybrid – with justification)
- High-level discussion of **AI / ML opportunities** relevant to the system

5. Assumptions, Research, and AI Use

At the end of your report and presentation, you must clearly list any assumptions made, Interviews conducted (if any), Online resources consulted (with links), Use of Generative AI tools (relevant conversation excerpts must be included in an appendix)

Deliverables

1. **Proposal Report:** 10–20 pages; Font size max 12, line spacing 1, Calibri; Proper formatting, TOC, captions, and references; Diagrams, mockups, and justifications included; Appendix with assumptions, resources, AI usage, and group meeting minutes
2. Should include the phased plan, diagrams, high-level requirements, website/app mockups, and references/assumptions.
3. In the appendix, include Meeting minutes of at least 3 group meetings.
4. **Group Presentation:** 10–15 minutes; Summary of proposal, diagrams, designs, and rationale; Q&A session

Important Reminder

We are **not asking you to build or code a working system**.

Your task is to **propose a well-reasoned, conceptually sound information system design**, demonstrating your understanding of **MIS concepts and their application** to the DhakaPark context.

Submission Instructions: Proposals must be submitted (as pdf format in the Canvas) as a **group of up to four/five students**. The **report is due by 22nd April 2026 (Wednesday)**. Presentations will be on 23rd (Thursday) and 25th (Saturday) of April.
